

15 Low-Barrier Creative Aftermarket Opportunities for Optimus

Costumes, shells, stands, wranglers, and photo booths for Tesla's humanoid robot, plus an honest look at the fact that you can't buy one yet.

Assigned by Jacob Peterson. Every factual claim links to its source. Prices are as listed by the linked sellers when checked on October 10, 2026; "suggested" prices are our proposals. No sales numbers, owner counts, or market sizes are estimated. Not affiliated with Tesla. "Tesla" and "Optimus" are Tesla's marks and are used here only to describe the robot.

STATUS Where Optimus actually stands (October 2026)

Short version: **announced, being built, not sold.** Optimus robots are being made, but Tesla is keeping them. There is no consumer channel, no price, and no developer program, so most of the fun ideas below either start on robots you *can* buy or rent today, or wait for robots to reach homes.

Question	What is on the record	Status
Can you buy one?	No. Tesla's Q2 2026 update (July 22) says Fremont's Model S/X lines were decommissioned and "first-generation lines for Optimus" are being installed, with production expected "soon." "The initial Optimus builds will be used in our Optimus Academy for training data collection." Its capacity table lists Optimus in California and Texas as "Construction." Independent checks found no preorder, deposit, or waitlist page on tesla.com as of October 5.	Shipping to Tesla only
When for consumers?	Musk's stated target is public sales "by the end of next year" (Davos, January 22, 2026), which is conditional, not a ship date. Reports say business customers come first.	Announced target
Price?	None published. Musk's \$20,000–\$30,000 figure is a long-run, at-volume target, restated at the October 2024 "We, Robot" event.	Target only
Specs?	Tesla has published no V3 height, weight, or payload. The widely repeated 173 cm / 57 kg are 2021 concept figures. Tesla's November 2024 hand demo had 22 degrees of freedom plus 3 in the wrist and forearm; a Tesla engineer later said the demo was teleoperated. Musk has described 50 actuators per robot (25 per forearm and hand) and said the design has since changed.	Mostly unpublished
Production rate?	The Information reported (September 25) that Tesla was building several hundred a week in August. Tesla has not confirmed this, and its Q3 deliveries release had no Optimus figures.	Reported, unconfirmed
Developer program / app store?	None announced. "Skills store" and public SDK articles are speculation.	None

Rules on modifications?	No Optimus terms exist yet. By analogy, Tesla's car warranty excludes damage caused by non-Tesla parts, accessories, or modifications, including third-party apps that touch vehicle software. US law (Magnuson-Moss) bars tying a warranty to brand-name parts, but a manufacturer can still deny claims for damage the aftermarket part caused.	Unknown; plan for strict
Using the name?	Tesla trademark terms prohibit using its marks to suggest affiliation or on unlicensed merchandise. Accessory sellers usually describe compatibility ("fits X") with a non-affiliation disclaimer. None of the brands below use "Tesla" or "Optimus."	Hard rule

S.1 The comparable aftermarket that already exists

- **Unitree** sells the G1 humanoid at **\$13,500** and the Go2 robot dog from **\$1,600** on its store. Its Dex3-1 hand is an optional add-on for the EDU edition, with no public price.
- **Boston Dynamics Spot** has an official accessory line (Arm, Dock, Cam 2, batteries) sold by quote. The Arm lifts 11 kg, and the Dock requires a Spot Enterprise license. Third-party payloads go through a partner program.
- **Robot costumes are already a product:** a Go2 "Panda Skin" lists at **\$1,000** (K-Robotics), and MCSDINO sells an Ankylosaurus costume shell for Go2 at **\$1,500**, robot not included.
- **Humanoid rental is a business:** ZMProbots rents a G1 from **\$299/day** self-service, or **\$1,875/day** with an operator. Tempo lists **\$2,999/day** operated in the US.
- **A home humanoid you can order:** 1X NEO costs **\$20,000** or **\$499/month**. HumanoidStore reports that the box includes a charger and a lint roller.
- **The Tesla car aftermarket as an analogy:** Tesla's own extended service plans run **\$50–\$150/month**. Third-party chrome-delete kits cost **\$139–\$189** DIY. Owners buy cosmetics and care plans.

HOW THE 15 ARE RANKED

Ranked by **ease of starting now**: how little capital and how few external dependencies it needs today.

START NOW ideas (1–9) work on robots you can already rent or buy, or need no robot at all, and can switch to Optimus later. **NEEDS ROBOTS IN HOMES** ideas (10–15) wait for consumer units.

SPECULATIVE marks ideas that depend on things Tesla hasn't announced.

Every idea shares one rule: brand it as your own, describe compatibility honestly, and never imply Tesla's endorsement.

START NOW

Can start before consumer Optimus ships

1 Robot Wrangler Weekly: the "living with a humanoid" channel **START NOW**

WHAT IT IS A video channel and newsletter that sorts announced from shipping (see the status table), reviews robots people can actually buy, and runs explainers like "Will it fit through your doorway?"

BUYER Curious future owners and early adopters, plus sponsors in home tech.

LOW BARRIER A camera, a newsletter tool, and research time. No robot needed at first; rent one for review episodes (from \$299/day at ZMProbots).

MONEY Sponsorships and paid tiers. *Suggested:* \$5/month supporter tier. There is no cited price comparable for this kind of content, so treat pricing as a test.

MUST BE TRUE Consistent publishing, and accuracy that beats the hype sites. No Tesla marks in the channel name.

GAPPY SAYS: *I fact-check robots so you don't buy a deposit in a trench coat.*

[Offbrand Human \(fake-preorder warning\)](#) · [ZMProbots](#)

2 **Tin Tailor: costume patterns for humanoid robots** START NOW

WHAT IT IS Downloadable sewing and EVA-foam patterns for robot outfits: holiday sweaters, tuxedo vests, mascot suits, chef aprons. Sized first for the Unitree G1, with a generic adult-humanoid size range for later robots.

BUYER Event teams renting humanoids, robot owners, cosplay makers.

LOW BARRIER A digital product with no inventory: design time, a test robot rental, and a storefront.

MONEY Kamui Cosplay sells PDF foam-armor patterns from **\$3.99** to a **\$136.18** 83-design bundle. Finished robot costumes sell at **\$1,000–\$1,500** (Go2 examples). *Suggested:* \$12–\$25 per pattern and \$49 bundles.

MUST BE TRUE Outfits must not block cameras, vents, joints, or hands. Check every design on a real robot. Use original designs, not Tesla styling.

GAPPY SAYS: *Every robot deserves an ugly holiday sweater.*

[Kamui Cosplay bundle](#) · [Kamui single pattern](#) · [K-Robotics](#) · [MCSDINO](#)

3 **Decal Droid: vinyl skins and decal kits for robots** START NOW

WHAT IT IS Pre-cut, removable vinyl kits (racing stripes, freckles, team colors, glow-in-the-dark trims) for robot dogs and humanoids, plus custom event branding.

BUYER Owners of Go2 and G1 robots today; brands running robot activations.

LOW BARRIER A vinyl cutter, templates, and removable-adhesive vinyl.

MONEY Car-aftermarket analogy: DIY Wrap Club's pre-cut chrome-delete kits cost **\$139–\$189**. *Suggested:* \$29–\$79 per kit, and custom event wraps by quote.

MUST BE TRUE Removable without residue. No decal over sensors. Expect any future Optimus warranty to treat damage from accessories like Tesla's car warranty does.

GAPPY SAYS: *Flames make it go faster. Science, probably.*

[DIY Wrap Club](#) · [Tesla warranty exclusions](#)

4 **Robot-Ready Home check** START NOW

WHAT IT IS A self-serve checklist plus an optional video walkthrough: doorway widths, stairs, rug edges, Wi-Fi dead zones, a charging spot with an outlet, pet and child zones, and "robot parking." It ends in a printable home-readiness report.

BUYER People considering a home humanoid, such as 1X NEO buyers today (\$20,000 or \$499/month) and future Optimus buyers.

LOW BARRIER A web form and a PDF generator; consults over video.

MONEY No cited direct comparable. *Suggested:* free checklist, \$29 detailed report, \$99 video walkthrough.

MUST BE TRUE Robot makers publish enough dimensions and requirements to check against. Today Tesla publishes none, so start with robots that have spec sheets.

GAPPY SAYS: *I measured your hallway. Your robot will need to breathe in.*

[1X NEO](#) · [No published V3 dimensions](#)

5 **Shell Shock Studio: 3D-printed cosmetic shells** **START NOW**

WHAT IT IS Clip-on cosmetic covers and helmet toppers (cat ears, knight visor, astronaut collar) for robots that can be bought today, sold as finished parts or STL files.

BUYER Owners of Go2 and G1 robots, event rental companies, makers.

LOW BARRIER A desktop 3D printer and CAD time. STL files sell with no inventory.

MONEY Full Go2 costume shells sell for **\$1,000–\$1,500**. *Suggested:* \$9–\$19 STL files and \$49–\$149 printed toppers.

MUST BE TRUE Light, with no load on joints. Attach without drilling. Original shapes only, not Tesla's industrial design.

GAPPY SAYS: *Cat ears: +10 charisma, –0 torque.*

[MCSDINO Go2 shell](#) · [K-Robotics](#)

6 **Bot Booth: robot photo booth for events** **START NOW**

WHAT IT IS A photo booth where a rented humanoid poses with guests, hands over props, and appears in the prints, with themed costumes from ideas 2 and 5.

BUYER Weddings, bar mitzvahs, corporate parties, trade-show booths.

LOW BARRIER Rent the robot instead of buying it (G1 from \$299/day self-service), plus a camera, lighting, and a print kit.

MONEY Check Cherry's data on about 118,000 photo-booth rentals puts the typical event at about **\$681**, with the middle half between **\$452 and \$1,022**. *Suggested:* priced as a premium booth, above that range.

MUST BE TRUE Insurance and venue approval. Safe distance between guests and robot. A trained handler on site.

GAPPY SAYS: *Say "cheese." The robot will say "calibrating."*

[Check Cherry pricing guide](#) · [ZMProbots](#)

7 **Robot Wrangler for hire: on-site operators** **START NOW**

WHAT IT IS A trained person who runs, guards, and explains a humanoid at events, choreographs the routine, and handles the crowd. You bring the robot; we bring the wrangler.

BUYER Agencies and rental firms that need operators, and brands that rent robots.

LOW BARRIER Skills, not capital: learn on rentals, then subcontract.

MONEY Operated G1 rentals list at **\$1,875/day** (ZMProbots) and **\$2,999/day** (Tempo, US), compared with **\$299–\$449/day** self-service. The operator is a large part of that gap. *Suggested:* a day rate under those operated prices, sold to self-service renters.

MUST BE TRUE Liability insurance and real safety training. Rental firms must allow third-party operators.

GAPPY SAYS: *Part stagehand, part lion tamer, all clipboard.*

[ZMProbots G1](#) · [Tempo Robots](#)

8 **Grip Kit: robot-friendly handles that help humans too** **START NOW**

WHAT IT IS 3D-printed oversized knobs, drawer pulls, and mug handles that are easier for robot hands to grip, and for people with weak grip, today. Bundled as “house kits.”

BUYER Accessibility-minded households now; robot homes later.

LOW BARRIER A printer and a handful of designs.

MONEY No cited comparable price. *Suggested:* \$5–\$15 per part and \$49 room kits.

MUST BE TRUE The human-accessibility case must stand on its own, because robot grasping needs are guesswork until hands ship. Tesla’s current hand design is unpublished.

GAPPY SAYS: *Same knob, two customers: Grandma and the robot.*

[Hand design status \(RoboZaps\)](#)

9 **Parking Spot: robot stands and “robot closet” furniture** **START NOW**

WHAT IT IS Display stands and a cabinet-style alcove where a home robot parks out of the way: cable channel, dust cover, nightlight. Prototype for G1 and Go2.

BUYER Robot owners who don’t want a robot standing in the hallway.

LOW BARRIER Plywood, CNC, or flat-pack plans sold digitally first.

MONEY Analogy: Tesla’s car accessories sell for tens to hundreds of dollars (for example, interior mats listed at **\$95**). *Suggested:* \$25 plans, \$199–\$499 finished stands.

MUST BE TRUE No charging hardware until the maker publishes a dock spec; cosmetic housing only. Spot Dock shows charging docks stay first-party (it requires an Enterprise license).

GAPPY SAYS: *Every robot needs a place to sit and think about what it did.*

[Tesla Shop mats](#) · [Spot Dock](#)

LATER Needs robots in homes

10 **Bot Butler: white-glove setup and onboarding** **NEEDS ROBOTS IN HOMES**

WHAT IT IS A local tech helps on delivery day: unboxing, Wi-Fi, home mapping, teaching the family the basics, and kid and pet rules.

BUYER New owners of any home humanoid.

LOW BARRIER A service business: training, a van optional. Pilot it now on 1X NEO deliveries if they arrive.

MONEY ZMProbots charges **\$100** for optional Pro Setup & Training. *Suggested:* \$149–\$249 per home visit.

MUST BE TRUE Robots reach homes, and the makers don't bundle setup themselves.

GAPPY SAYS: *Step one: name it. Step two: don't name it "Toaster."*

[ZMProbots pricing](#) · [1X NEO](#)

11 **Robot Sitter: cosmetic cleaning and check-ups** **NEEDS ROBOTS IN HOMES**

WHAT IT IS Monthly visits for wipe-downs, lens cleaning, costume laundering, and a visual check with a photo report. No opening panels, no repairs.

BUYER Busy owners and offices with robots.

LOW BARRIER Cleaning supplies and a checklist.

MONEY Fun precedent: 1X NEO ships with a lint roller (HumanoidStore), which suggests the robot gets fuzzy. *Suggested:* \$39/visit or \$29/month.

MUST BE TRUE Manufacturer care guidance allows it. Stay strictly cosmetic, because Tesla's car warranty language excludes damage from non-Tesla service.

GAPPY SAYS: *Even robots need someone to get the cat hair off.*

[HumanoidStore: NEO box contents](#) · [Tesla warranty](#)

12 **Hand Couture: gloves and grip sleeves** **NEEDS ROBOTS IN HOMES** **SPECULATIVE**

WHAT IT IS Washable gloves for messy chores (garden, kitchen) and fun ones for show (white Mickey-style, sequins).

BUYER Home owners who don't want the robot's hands to get grubby.

LOW BARRIER Sewing and silicone casting.

MONEY No comparable yet. *Suggested:* \$19–\$49 a pair.

MUST BE TRUE Tesla publishes hand dimensions and allows coverings. Gloves must not dull touch sensing or void the warranty. The current hand design is unpublished and reportedly still changing.

GAPPY SAYS: *Jazz hands, now machine-washable.*

[RoboZaps hand timeline](#) · [Hands reported as a bottleneck](#)

13 **Botique: peer marketplace for robot outfits and add-ons** **NEEDS ROBOTS IN HOMES**

WHAT IT IS An Etsy-style market for robot costumes, decals, stands, and used accessories, with fit tags per model.

BUYER Makers from ideas 2, 3, 5, and 9, and their customers.

LOW BARRIER Start as a curated directory, then add checkout.

MONEY A commission on sales. *Suggested:* 8–10% plus listing fees. No cited marketplace comparable for robots exists yet, which is the opening.

MUST BE TRUE Enough robots in homes to make a two-sided market, and strict screening for listings that use Tesla's marks.

GAPPY SAYS: *The first mall where every mannequin can walk out.*

[Tesla trademark terms](#)

14 **Bump Cover: care plans for cosmetic damage** NEEDS ROBOTS IN HOMES INSURANCE LAW

WHAT IT IS A subscription that replaces scuffed costumes, shells, and decals, and covers the aftermarket gear itself, not the robot.

BUYER Owners who buy ideas 2, 3, 5, and 12.

LOW BARRIER Starts as a seller-backed replacement guarantee on your own products.

MONEY Analogy: Tesla's extended service plans cost **\$50–\$150/month** for cars. *Suggested*: \$4–\$8/month for accessory cover.

MUST BE TRUE Anything beyond a warranty on your own products is insurance and needs a licensed partner. Covering the robot itself depends on whatever terms Tesla publishes.

GAPPY SAYS: *Robots bump into things. So do I. We're both covered.*

[Tesla Extended Service Agreement](#)

15 **Mood Mixtape: personality and routine packs** NEEDS ROBOTS IN HOMES SPECULATIVE

WHAT IT IS Themed routines: a butler greeting, a dance-party mode, a holiday “elf on the shelf” prank pack.

BUYER Owners who want their robot to have some flair.

LOW BARRIER Only if a developer path exists. Today Tesla has announced none, so this is a placeholder. A practical step now: build routines for robots with SDKs, such as Unitree's G1-EDU (its store notes the base G1 “does not support secondary development”).

MONEY *Suggested*: \$2.99–\$9.99 per pack, if a store and rules ever exist.

MUST BE TRUE Tesla opens a skills or app channel with terms that allow third-party content. Until then, any packaged “Optimus routine” is fiction.

GAPPY SAYS: *I wrote a robot disco routine. Now we wait for permission to boogie.*

[Unitree G1 store \(secondary development note\)](#) · [No Optimus developer offer on tesla.com](#)

RULES **Ground rules for every idea**

G.1 **Brand, safety, and timing**

- **Marks:** use your own name. Say “fits humanoid robots, including [model]” only where it's true, with a non-affiliation line. No Tesla logos or lookalike styling.
- **Safety:** nothing that loads joints, covers sensors, or touches batteries and electronics. Cosmetic and removable only.
- **Timing:** build on Unitree, 1X, and rental robots now. Treat Optimus as an upgrade path, not a launch date, because Tesla's consumer timeline is a conditional target.
- **Numbers:** no owner counts or market sizes exist to plan against. Validate each idea with a landing page or a rental-event pilot first.
