Selling Game Asset Packs in 2026: Where to Sell, What Sells, What Creators Really Earn and the AI Rules

Where to sell game asset packs, which packs sell, what creators say they earned, and how to use AI without breaking store rules.

Assigned by Jacob Peterson · Research. Checked Oct 29, 2026. Every claim links to its source; numbers appear only where a cited source states them.

SUMMARY Bottom line

1 Small, specific, human-finished packs, sold on low-fee stores, with a free sample as the funnel

Store cuts now favor sellers: Roblox Creator Store passes on **100% of net proceeds** (only taxes and processing deducted), itch.io defaults to **10%**, Fab pays **88%**, CGTrader **up to 85%**, Unity **70%**, TurboSquid starts at **40%**. The hard part is getting found, not the split. Published earnings from small sellers are modest ($71 in five months, $230 in two years), while a single well-targeted pack reached **$2,000**.

AI can speed up production, but every major store now requires disclosure, Unity and itch.io reject mass-produced AI catalogs, TurboSquid bans AI uploads outright, and US copyright protects only the human-made parts. So use AI for drafts and finish by hand: retopology, rigging, consistent palette, engine-ready prefabs and demo scenes. That finishing work is what buyers pay for.

1 Where to sell: splits, fees and rules

1.1 Unity Asset Store: 70% to you, curated review

It's free to publish, and you keep 70% of revenue. The curation team reviews every package. AI-made content must be described in a plain "AI description" field that names the tools and what was changed by hand. Words like "hand drawn" are banned on AI work, and Unity can reject "mass-produced" AI packs that lack differentiation.

Unity: Start publishing · Submission Guidelines §1.6

1.2 Fab (Epic): 88% to you, CreatedWithAI tag required

Sellers get 88% after sales tax, processing, discounts and refunds, and reports come quarterly. Content where "a material portion" is AI-generated must carry the CreatedWithAI tag, and buyers can filter it out. Since June 2025, Epic can moderate missing tags. A NoAI tag stops buyers from using your content to train AI.

Fab Distribution Agreement · Epic forum: June 2025 updates · Fab AI info

1.3 itch.io: you pick the cut (default 10%)

Open revenue sharing runs from 0% to 100%, with 10% as the default. Payment fees (generally $0.30 + 2.9%) come out on top: a $10 sale nets $8.41 at the default. AI disclosure is *required for all asset pages*, and undisclosed AI assets lose browse indexing. Mass-produced AI pages are treated as spam.

itch.io payments · itch.io AI disclosure · Quality guidelines

1.4 Roblox Creator Store: 100% of net, USD, strict eligibility

You can sell Models ($2.99–$49.99, since Dec 2025) and Plugins ($4.99–$249.99) for real dollars through Stripe and keep 100% of net. Money sits in a 30-day escrow and pays monthly. Since Aug 2026, sellers need ID verification, 2-step verification, good standing and a supported country.

Creator Store docs · DevForum: models launch · DevForum: new requirements

1.5 CGTrader (up to 85%) and TurboSquid (40% start, no AI)

CGTrader is free to list and pays up to 85%, scaling with your last 12 months of sales, 20 days after each sale. Its terms let it train AI on your models unless you choose a "No AI" license. TurboSquid starts new sellers at 40%, up to 80% through its SquidGuild and affiliate programs, and **does not accept AI-generated content**.

CGTrader: Sell · CGTrader terms §18.5 · TurboSquid royalty · TurboSquid AI policy

1.6 Humble Bundle: a later-stage channel

Humble runs curated bundles, and buyers can move sliders to split their payment between publishers, Humble and charity. Synty has run several 2026 game-dev bundles, such as Best of Synty 6 at 12 packs for $30. Treat Humble as a channel to reach once you have a catalog, not a place to launch.

Humble: sliders · Synty: Best of Synty 6

2 What sells: real best-sellers and prices

2.1 2D pixel tilesets and UI (itch.io top sellers)

LimeZu's 16×16 RPG tilesets dominate itch's top sellers: Modern Exteriors at $2.50, Modern User Interface at $3.90, Modern Farm at $4.95. Also near the top are Pixel Frog's Tiny Swords: Warfare ($15), GandalfHardcore's 600+ item icons ($0.60) and a zombie pack with tiles, characters and UI ($1.50). Cute, cozy, top-down styles recur.

itch.io top-selling assets (viewed Oct 29, 2026)

2.2 Low-poly 3D kits and mega-bundles

Kenney's All-in-1 (60,000+ assets) sells for $19.95. Quaternius (MegaKits, Universal Animation Library) and Kay Lousberg (KayKit) fill much of the top-sellers list, and KayKit sells a 14-character monthly pack at $13.39. On Unity, Synty's POLYGON packs run from $4.99 to $349.99, with most between $9.99 and $49.99.

itch.io top sellers · Unity: POLYGON series

2.3 Animations, audio, tools and "Made by Humans" assets

Retargetable animation libraries (Quaternius, 120+ and 130+ animations) are top sellers. UI sound effects sell too: Cute & Cozy UI SFX (200+ sounds) is £4.24. On Unity, tools like Feel ($50) show that code and juice tools earn more per copy than art. Tellingly, a "Made By Humans / No AI" splash-screen asset also ranks among itch's top sellers.

itch.io top sellers · Unity listing

2.4 Roblox items

Paid Roblox Models are capped at $49.99 and Plugins at $249.99. The store opened model sales only in Dec 2025, so it's an early market with fewer established paid sellers. We found no published best-seller rankings for paid models, so we don't quote any.

Creator Store docs

---

3 What creators say they earned

3.1 The honest low end

One seller with 17 itch listings (7 paid, $3.95–$9.95) made **$71.16 gross in five months**. Their GUI kits sold, their tilesets didn't, and one forum post brought more traffic than any marketplace feature. Another pixel artist made **$230 over two years**, with 60% of it in the last three months after switching to cute top-down "Pocket" packs.

r/gamedev: five months of numbers · r/itchio: $230 in two years

3.2 The breakout pack

After years of free assets that earned little, one itch seller's single new pack reached **$2,000 in revenue** within a few months. The seller estimated keeping about 60% after all cuts. Unity forum threads show established publishers reporting monthly gross in the low thousands, with spikes during sales; those are self-reports, not store data.

4 AI production tools and licensing risk

4.1 Higgsfield (Jacob already has it)

You own your outputs and can use them commercially on Starter, Plus and Ultra plans; free-plan outputs can't be used commercially. Higgsfield may train on your content unless you delete it. It's best for **marketing** (trailers, store-page videos and key art), which Unity says needs no AI disclosure when it accurately reflects the pack. Higgsfield isn't built for making game-ready meshes.

Higgsfield: ownership · Higgsfield pricing · Unity §1.6.b

4.2 Meshy and Tripo for 3D drafts

Meshy's paid plans ($20, $40 and $100 a month) give private models with commercial ownership, while free outputs are CC BY 4.0 with attribution. Tripo's free models are public and non-commercial; Pro ($20/mo) adds private, commercial use. Both say they can't guarantee you're free of third-party claims. CGTrader's own AI tool also says outputs may not be unique.

Meshy pricing · Meshy terms · Tripo pricing · CGTrader AI terms §3.2

4.3 Copyright: buyers want rights you might not have

The US Copyright Office (Jan 2025) says purely AI-generated material isn't copyrightable and prompts alone aren't enough; protection covers human expression, selection, arrangement and modification. Practical upshot: a pack that is raw AI output gives buyers a weak license and copycats easy reuse. Do real human finishing, keep process files, disclose AI on every store, and skip TurboSquid for any AI-assisted work.

5 Gaps and creative pack ideas

5.1 Where the openings are (our read of the sources above)

Roblox paid models have been for sale only since Dec 2025 and pay 100% of net, so it's an early market. **"Made by Humans" demand** is real: a No-AI badge asset ranks in itch's top sellers, and Fab and itch let buyers filter AI out. **Matching sets** sell: the top itch sellers are series (LimeZu "Modern", KayKit, MegaKits) where every pack fits the others.

itch.io top sellers · Roblox DevForum

5.2 Creative pack ideas (ideas, not validated demand)

- **"Cozy Everything" series:** one palette and grid across tiles, UI, SFX and characters, sold separately and as an All-in-One that includes future packs (the Kenney and Pizza Doggy model).
- **Roblox obby and tycoon kits:** drop-in model sets with scripted parts, priced inside the $2.99–$49.99 range.
- **PSX/retro horror micro-kits:** PSX Mega Pack shows lo-fi retro sells cheaply at volume.
- **Game "juice" packs:** VFX, screen shake and UI SFX together for one genre (cozy farm, roguelite).
- **Real-place packs:** a Pacific Northwest diner, ferry terminal or logging town, regional settings rarely seen in packs.
- **Accessibility UI kit:** colorblind-safe, high-contrast and large-text versions of a full GUI.

- **Animated store-page trailers:** made in Higgsfield for every pack, as a marketing edge, not part of the product.

6 Costs, needs, 30-day plan

6.1 Costs and needs

- **Store accounts:** free on Unity, Fab, itch.io and CGTrader. Roblox needs ID verification, 2-step verification and a Stripe account.
- **AI tools:** Higgsfield (already paid for), plus Meshy Pro or Tripo Pro at about $20/mo each, only if doing 3D.
- **Free software:** Blender (3D cleanup, rigging), Aseprite or LibreSprite (pixel art; Aseprite is paid), and Unity, Godot or Roblox Studio for demo scenes.
- **People:** one artist or tech-artist to do the human finishing. This is the real cost and the real value.
- **Admin:** tax interviews (Unity, Fab), payout setup, a clear license page and AI disclosure on every listing.

6.2 30-day launch plan

- **Days 1–5:** pick one niche and one style. Study the top 20 itch and Unity listings in it. Set up itch, Fab, Unity and Roblox seller accounts.
- **Days 6–15:** build Pack #1 (40–100 cohesive assets) plus a *free sample* pack. Make engine demo scenes. Write AI disclosures as you go.
- **Days 16–20:** make store art and a 20–30 second trailer in Higgsfield, then write honest listings.
- **Days 21–24:** launch the free sample on itch first, then the paid pack on itch and Fab. Submit to Unity, since review takes time.
- **Days 25–30:** post once in each engine forum or community and on social media. Track views against sales, then start Pack #2 in the same series.

6.3 Bottom line

It's cheap to start, the store cuts are generous, and the market rewards **series, consistency and engine-ready polish** over volume. Expect small early sales (the published numbers prove it). Plan on 3–5 packs in one matching series before judging results, use AI for drafts and marketing only with human finishing and full disclosure, and look closely at Roblox's 100% model store as the least crowded opening.
